

CTEK launches BATTERY SENSE 2.0 App to provide a clear picture of battery health

CTEK a leading global brand in the care and maintenance of vehicle batteries has expanded the App functions to support the use of BATTERY SENSE, a Bluetooth enabled battery monitor, providing even more information about your vehicle battery – helping to prevent unnecessary breakdowns and maximising battery performance.

The BATTERY SENSE unit is easy to install and data is delivered through a free to download iPhone or Android App. Once connected, the monitor continuously tracks the vehicle battery to get information about state of battery health, syncing stats automatically to your mobile phone via Bluetooth and providing a simple to understand condition report. And with version 2.0 of the BATTERY SENSE App, there are some exciting new features to paint an even clearer, more accurate picture of battery health than ever before - putting the control over the vehicle's battery literally in your hands.

New features for BATTERY SENSE 2.0 App:

- By popular demand, when your phone is in Bluetooth range of the BATTERY SENSE unit you can get instant battery voltage and temperature readouts.
- If you need information for a specific day, no problem – just zoom in on the constantly updated status graph for clear, easy to read statistics on your battery status.
- You can use BATTERY SENSE with a wide range of vehicle, motorcycle and starter batteries of 5Ah or over, and using the 2.0 App you can now manually input different battery capacities from 5Ah to 200Ah for even more accurate monitoring.
- Battery Sense can now detect if your battery is providing standby power – to lights for example – and will automatically allow for this to provide an accurate picture of true battery condition
- With version 2.0 of the BATTERY SENSE App you will continue to receive a push notification if the battery's state of charge falls to a critical level or if measurements have not been taken for seven days.

The App also enables multiple battery sense monitors to be synced to the phone so you can keep track of all of your vehicles at the same time.

Sten Hammargren from CTEK said "We are really pleased with the response that we have had to the launch of our BATTERY SENSE product and the launch of version 2.0 of our App brings even more useful features – some of which have been developed in response to customer feedback. BATTERY SENSE means no more worrying about whether your car is going to start or when to charge. BATTERY SENSE provides valuable information about the vehicle battery in a simple, user-friendly way which is our way of helping our customers to protect against breakdowns and get the most out of their vehicles."
